

5.Convert a database model into YAML

```
---  
mydatabase:  
  hotelroom:  
    - _id: 1  
      roomID: 1  
      orderID: 1  
      customerID: 1  
    - _id: 2  
      roomID: 1  
      orderID: 5  
      customerID: 3  
    - _id: 3  
      roomID: 2  
      orderID: 7  
      customerID: 4  
    - _id: 4  
      roomID: 3  
      orderID: 4  
      customerID: 2  
  rooms:  
    - _id: 1  
      roomType: Delux  
    - _id: 2  
      roomType: Single  
    - _id: 3  
      roomType: Double  
    - _id: 4  
      roomType: Suite  
  reservation:
```

- _id: 1
reserved: '2022-10-21'

- _id: 2
